

MUHAMMAD FARID FEBRIANSYAH PRASETYO

0895-1967-9340 | faridmuhammad.1402@gmail.com | [linkedin.com/in/muhammadfarid14](https://www.linkedin.com/in/muhammadfarid14)

Bekasi, Jawa Barat, Indonesia

Mechatronics and Artificial Intelligence student with a deep understanding of data structures, algorithms, and object-oriented programming logic, which provides a strong foundation for data processing and model development. Demonstrated problem-solving and analytical thinking skills through experience building systems. Passionate about learning and implementing new technologies in Machine Learning and Data Analytics. Experienced in developing machine learning models using Python (Scikit-Learn, TensorFlow), data processing. Familiar with data visualization and dashboard development using Matplotlib, Seaborn, and Power BI. Strong technical communication skills, able to explain complex concepts to a variety of audiences. Seeking an Internship in AI/Machine Learning or Data Scientist to contribute to data processing and predictive modeling initiatives.

EDUCATION

Universitas Pendidikan Indonesia

Purwakarta, Indonesia

Majoring: Mechatronics and Artificial Intelligence | GPA: 3.69 / 4.00

Sep 2023 – Present

Relevant Courses:

Basic Programming, Database Systems, Algorithms & Data Structures, Object-Oriented Programming, Artificial Intelligence, Statistic, Machine Learning, Data Science

EXPERIENCE

Intern IT Developer

Feb - June 2026

Yamaha Indonesia Motor MFG

- Developed an AI-Based Surface Quality Inspection System for automated material defect classification in manufacturing processes
- Performed image preprocessing, exploratory data analysis (EDA), model training, and evaluation using TensorFlow and MobileNetV2 architecture
- Achieved high classification performance through transfer learning techniques for binary classification of GOOD and DEFECT material surfaces
- Integrated OpenCV-based real-time inspection, automated defect logging, and defect image archival for quality monitoring
- Built and deployed an interactive Streamlit dashboard to monitor inspection statistics, defect rates, inspection history, and visual defect evidence

PROJECT

Stuckie

Apr 2026

Next.js (React), Tailwind CSS, Zustand, Aseprite, Azure Open AI

- Developed a web-based financial simulation game, Market & Asset Management Tycoon, using Next.js and React.
- Managed the game's economic system and investment assets using Zustand for real-time stock prices and player balances.
- Integrated Microsoft Azure OpenAI Service and Azure AI Document Intelligence for chatbots and financial document data extraction.
- Designed a Swipe to Invest feature and a user-lifestyle-based income projection calculator.
- Built a futuristic, retro-themed UI using Tailwind CSS and deployed with Azure Static Web Apps.

Temam Sehat

Nov 2025

Node.js, Tailwind CSS, Python, Vector Database

- Developed an AI-based health chatbot integrating expert system + LLM concept for disease screening
- Built rule-based diagnostic engine for early symptom assessment using decision logic
- Implemented knowledge base using a vector database referencing JKN facilities and medical rules

Mechasense

Nov 2025

Node.js, Tailwind css, Python, Firebase

- Designed and implemented database structure using Firebase Realtime Database
- Developed a responsive and user-friendly interface
- Built bearing fault prediction models using Machine Learning techniques
- Implemented electrical parameter monitoring using IoT sensors
- Developed motor condition diagnosis through Expert System integration

Predicting New Patient Fee Classes

Nov 2025

Python, Streamlit, NumPy, Scikit-Learn

- Processed and analyzed 94,000+ healthcare membership records from a national health insurance dataset
- Built and compared multiple models, including Logistic Regression and Random Forest Classifier
- Achieved 82% classification accuracy with balanced performance across major and minor classes
- Evaluated models using accuracy, precision, recall, F1-score, and confusion matrix
- Trained a final production-ready model and validated it using unseen (new) data samples

AI Agentic Remove BG

Jan 2026

Python, Streamlit, rembg, AI Agent

- Built an AI-powered image upload system to remove backgrounds instantly
- Designed and implemented an agentic workflow from user input to AI inference and final output
- Applied pre-trained deep learning models to achieve high-quality background removal
- Generated transparent PNG outputs with integrated download functionality
- Developed a lightweight and responsive web interface using Streamlit

ORGANIZATIONAL EXPERIENCE

BEM REMA UPI

Feb - Okt 2026

Staff of Scientific

- Led and Coordinate Ormawa
- Creating a monitoring system via a spreadsheet

SKILLS

Programming :	Python (Pandas, NumPy, Scikit-Learn, TensorFlow, OpenCV), SQL (MySQL, PostgreSQL), Java (OOP), PHP, JavaScript
Tools :	Git, VS Code, Jupyter Notebook, Cursor
Soft Skills :	Analytical Thinking, Team Collaboration, Communication, Curiosity, Problem Solving, Leadership, Fast Learner

CERTIFICATIONS

-
- Machine Learning Path – Dicoding Indonesia (2024)
 - Data Analysis with Python – Coginitive Class (2026)
 - Customer Clustering with KMeans to Boost Business Strategy – Coginitive Class (2026)
